3	Revision History	5

DRAFT

1 Introduction

This document demonstrates using a YAML manifest file to define document metadata instead of manually setting `\title{}`, `\author{}`, etc.

The manifest file contains all document metadata in a structured format, making it easier to manage and update.

DRAFT

2 Features

2.1 Automatic Metadata

The `\applymanifest` command reads the manifest and sets:

- Document title
- Short title (for headers)
- Author
- Date
- Revision number
- Document ID
- Draft watermark (if enabled)

2.2 Revision History

The `\makerevisionhistory` command generates a revision table from the manifest's history section.

3 Revision History

Revision	Date	Author	Changes
A-rc1	2025-01-17	Ed Hill	Initial draft
